Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Corynebacterium glutamicum.

Corynebacterium glutamicum

Bacteria; Firmicutes; Actinobacteria; Actinobacteridae;

Actinomycetales; Corynebacterineae; Corynebacteriaceae;

Corynebacterium.

Hanke, P.D.

Feedback-resistant pyruvate carboxylase gene from corynebacterium

Patent: WO 0231158-A 3 18-APR-2002;

ARCHER-DANIELS-MIDLAND COMPANY (US)

DEFINITION Corynebacterium efficiens pyc gene for pyruvate carboxylase, complete cds.
ACCESSION AB083299
VERSION AB083299.1
KEYWORDS GI:20126703
SOURCE Corynebacterium efficiens DNA.
ORGANISM Corynebacterium efficiens
 Bacteria; Firmicutes; Actinobacteria; Actinobacteridae; Actinomycetales; Corynebacterineae; Corynebacteriaceae; Corynebacterium.
REFERENCE
AUTHORS Akiyoshi, N., Nonaka, G., Kimura, E., Kawahara, Y. and Sugimoto, S.
TITLE Corynebacterium efficiens pyruvate carboxylase (pyc) gene, complete CDS
JOURNAL Published Only in Database (2002)
REFERENCE 2 (bases 1 to 4851)
AUTHORS Nonaka, G., Akiyoshi, N., Kimura, E., Kawahara, Y. and Sugimoto, S.
TITLE Direct Submission
JOURNAL Submitted (08-APR-2002) Gen Nonaka, AJINOMOTO CO., INC., Fermentation Biotechnology Laboratories; 1-1 Suzuki-cho, Kawasaki, Kanagawa 210-8681, Japan [E-mail: gen.nonaka@ajinomoto.com, Tel:81-44-244-7138, Fax:81-44-244-4757]

KEYWORDS
Corynebacterium glutamicum.
SOURCE
Corynebacterium glutamicum.
ORGANISM
Bacteria; Firmicutes; Actinobacteria; Actinobacteridae;
Actinomycetales; Corynebacterineae; Corynebacteriaceae;
Corynebacterium
1 (bases 1 to 1719)
Pompejus, M., Kroeger, B., Schroeder, H., Zelder, O. and Haberhauer, G.
AUTHORS
Corynebacterium glutamicum genes encoding proteins involved in
TITLE
carbon metabolism and energy production
JOURNAL
Patent: WO 0100844-A 119 04-JAN-2001;
BASF AKTIENGESCHAFTE (DE)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Novel polynucleotides encoding Corynebacterium glutamicum pyruvate
PT carboxylase useful for industrial fermentation processes comprises a
PT specific nucleotide sequence
XX Claim 3; Fig 1; 51pp; English.
XX The pyruvate carboxylase of Corynebacterium glutamicum can be used
CC for producing amino acids, preferably lysine and glutamic acid in
CC industrial fermentations and for replenishing oxaloacetate consumed
CC for biosynthesis during growth. By incorporating the pyruvate
CC carboxylase gene in expression vectors levels of expression can be
CC 2 - 20 fold higher than in Corynebacterium glutamicum.

XX Novel nucleic acid encoding pyruvate carboxylase from *Corynebacterium*
PT glutamicum, for replenishing oxaloacetate consumed during lysine and
PT glutamic acid production in industrial fermentations -
XX
PS Claim 2; Column 23-30; 29pp; English.
XX The present invention provides the protein and coding sequences of the
CC *Corynebacterium glutamicum* pyruvate carboxylase protein. This is an
CC enzyme in the anaplerotic pathway. It can be used in the replenishment of
CC oxaloacetate consumed during lysine and glutamic acid production in
CC industrial fermentation.

PT Novel polynucleotides derived from Coryneform bacteria, for identifying
PT mutation point of a gene, measuring expression of a gene, analysing
PT expression profile or pattern of a gene and identifying homologous gene

XX Disclosure; SEQ ID NO: 7061; 246pp + Sequence Listing; English.

XX The present invention provides a number of nucleotide and protein
XX sequences from the Corynebacterium bacterium Corynebacterium glutamicum. These
XX are useful for identifying the mutation point of a gene derived from a
XX mutant of corynebacterium bacterium, measuring expression amount and
XX analysing the expression profile or expression pattern of a gene derived
XX from Corynebacterium bacterium, and identifying a homologue of a gene derived
XX from corynebacterium bacterium. Corynebacterium bacteria are useful for producing
XX amino acids, nucleic acids, vitamins, saccharides and organic acids,
XX particularly L-lysine. The present sequence is a nucleic acid described
XX in the exemplification of the invention.

XX Note: The sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from the
XX European Patent Office.

increasing activity or expression of pyruvate carboxylase

PS

Claim 16; Page 8-11; 18pp; German.

XX

This invention describes the isolation of a pyruvate carboxylase from *Corynebacterium glutamicum* which is used in a novel method for production of lysine, threonine, homoserine, glutamate and/or arginine, variously useful as feed additives, condiments, pharmaceuticals and intermediates for fine chemicals. Increasing pyruvate carboxylase activity increases the yield of microbial production of amino acids, the aspartate and/or glutamate families, e.g. about 50% more lysine, 40% more threonine and 150% more homoserine are secreted into the culture medium.

PT Proteins and their DNA useful for microbial production of L-amino acids

XX -

PS Claim 34; Page 126-132; 215pp; Japanese.

XX The present sequence is provided in a specification relating to genes
CC encoding thermophilic amino acid biosynthesis system enzymes of
CC the thermotolerant bacterium *Corynebacterium thermoaminogenes*.
CC The novel proteins retain at least 30% isocitrate lyase activity
CC after heating at 500C for 5 minutes. DNA fragments encoding the
CC enzymes were isolated from a *Corynebacterium thermoaminogenes*
CC chromosomal DNA plasmid library by PCR. The DNA may be used for
CC developing strains of amino acid producing microorganisms.

| XX | | | |
| CC | AAAF1360 to AAF1750 encode the Corynebacterium glutamicum sugar | | |
| CC | metabolism and oxidative phosphorylation (SMP) proteins given in | | |
| CC | AAAF79243 to AAB 79633 which are involved in carbon metabolism and | | |
| CC | energy production. The C. glutamicum SMP gene can be used in vectors | | |
| CC | (II) for expression in host cells and production or modulation of | | |
| CC | production of fine chemicals, such as, an organic acid, a proteinogenic | | |
| CC | or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, | | |
| CC | a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty | | |
| CC | acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a | | |
| CC | cofactor, a polyketide, or an enzyme. The presence of (I) or SMP protein | | |
| CC | (III) encoded by them are used for diagnosing the presence or activity of | | |
| CC | Corynebacterium diphtheriae in a subject. (I), (II), (III) or host cells | | |
| CC | containing them are used to map genomes of organisms related to | | |
| CC | C. glutamicum, identify and localise C. glutamicum sequences of interest | | |
| CC | in evolutionary studies, in determining SMP protein regions required | | |
| CC | for function, in modulating SMP protein activity, in modulating the | | |
| CC | metabolism of sugars, and in modulating high-energy molecule production | | |
| CC | in a cell (i.e. ATP, NADPH). | | |

XX New isolated Corynebacterium glutamicum nucleic acid encoding a sugar
PT metabolism and oxidative phosphorylation protein for production or
PT modulation of production of fine chemicals e.g. amino acids,
PT carbohydrates or enzymes -
XX Claim 3; Page 311-312; 1246pp; English.
XX AAF71360 to AAF71750 encode the Corynebacterium glutamicum sugar
CC metabolism and oxidative phosphorylation (SMP) proteins given in
CC AAB79243 to AAB 79633 which are involved in carbon metabolism and
CC energy production. The C. glutamicum SMP gene can be used in vectors
CC (ii) for expression in host cells and production or modulation of
CC production of fine chemicals, such as, an organic acid, a proteinogenic
CC or nonproteinogenic amino acid (preferred), a purine or pyrimidine base,
CC a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty

CC acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a
CC cofactor, a polyketide, or an enzyme. The presence of (i) or SMP proteins
CC (iii) encoded by them are used for diagnosing the presence or activity of
CC Corynebacterium diphtheriae in a subject. (ii), (iii) or host cells
CC containing them are used to map genomes of organisms related to
CC C. glutamicum, identify and localise C. glutamicum sequences of interest,
CC in evolutionary studies, in determining SMP protein regions required
CC for function, in modulating SMP protein activity, in modulating the
CC metabolism of sugars, and in modulating high-energy molecule production
CC in a cell (i.e. ATP, NADPH).

New isolated Corynebacterium glutamicum nucleic acid encoding a sugar metabolism and oxidative phosphorylation protein for production or modulation of production of fine chemicals e.g. amino acids, carbohydrates or enzymes -

Claim 3; Page 308-310; 1246pp; English.

AA871360 to AA871750 encode the Corynebacterium glutamicum sugar metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 to AAB 79633 which are involved in carbon metabolism and energy production. The C. glutamicum SMP gene can be used in vectors (ii) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a polyketide, or an enzyme. The presence of (i) or SMP proteins (iii) encoded by them are used for diagnosing the presence or activity of Corynebacterium diptheriae in a subject. (i), (ii), (iii) or host cells containing them are used to map genomes of organisms related to C. glutamicum, identify and localise C. glutamicum sequences of interest, in evolutionary studies, in determining SMP protein regions required for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production in a cell (i.e. ATP, NADPH).

XX Predicting toxic effects of compounds or the progression of these toxic
XX effects by determining the changes in gene expression in tissues or
XX cells exposed to the toxin and comparing these to gene expression in
XX unexposed tissues or cells -
XX Claim 1; Seq ID No 1566; 239pp; English.
XX The invention relates to methods for predicting toxic effects of
XX compounds or the progression of these toxic effects by determining the
XX global changes in gene expression in tissues or cells exposed to the
XX toxin and comparing these to gene expression in unexposed tissues or
XX cells. Also included are methods of predicting at least one toxic
XX effect of a compound or progression of a toxic effect, preferably the
XX hepatotoxicity of a compound, comprising detecting the level of
XX expression in a tissue or cell sample exposed to the compound of two or
XX more genes listed in the specification, where differential expression of
XX the genes is indicative of at least one toxic effect or progression.
XX The method can also be used to identify an agent which modulates the
XX toxic response and predict cellular pathways that a compound modulates
XX in a cell. The methods utilise a set of at least two probes (on a solid
XX support in kit form), where each of the probes comprises a sequence that
XX specifically hybridises to a gene listed in the specification, a computer
XX system comprising a database containing information identifying the
XX expression level in a tissue or cell sample exposed to a hepatotoxin of a
XX set of genes comprising at least two genes listed in the specification,
XX and a user interface to view the information used to present information
XX identifying the expression level in a tissue or cell of at least one gene
XX listed in the specification. The method is useful for elucidating global
XX changes in gene expression and for identifying toxicity markers in
XX tissues or cell exposed to a known toxin. The genes may be used as
XX toxicity markers in drug screening and toxicity assays. The genes and
XX gene expression information may be used as diagnostic markers for the
XX prediction or identification of the physiological state of tissue or cell
XX sample that has been exposed to a compound or agent. Hepatotoxicity
XX is characterised by centrilobular necrosis and steatosis. The present
XX sequence is an expressed sequence tag (EST) or cDNA derived from a gene
XX which is differentially expressed in response to a hepatotoxic agent.

XX
XX Diagnosing and detecting the progression of liver cancer,
XX PT hepatocellular carcinoma or metastatic liver tumor in a patient,
XX PT involves detecting the level of expression of two or more genes in a
XX PT liver tissue sample -
XX
XX Claim 1; SEQ ID NO 3030; 298pp; English.
XX
XX The invention relates to a novel method for diagnosing and detecting the
XX progression of liver cancer, hepatocellular carcinoma or metastatic liver
XX tumour in a patient, and differentiating metastatic liver cancer from
XX hepatocellular carcinoma in a patient, involving detecting the level of
XX expression of two or more genes represented in ABN93503-ABN97455 in a
XX tissue sample. The method of the invention has hepatotropic, and
XX cytostatic activity. The method is useful for diagnosing and detecting
XX the progression of liver cancer, hepatocellular carcinoma and metastatic
XX liver carcinoma in a patient. The method is useful for identifying
XX expression profiles which serve as useful diagnostic markers as well as
XX markers that can be used to monitor disease states, disease progression,
XX drug toxicity, drug efficacy and drug metabolism.
XX Note: The sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

; Sequence 1, Application US/09974973
; Patent No. US20020177202A1
; GENERAL INFORMATION:
; APPLICANT: Hanke, Paul D.
; TITLE OF INVENTION: Feedback-Resistant Pyruvate Carboxylase Gene from Corynebacteri
; FILE REFERENCE: 1533.1230001/MAC/RGM
; CURRENT APPLICATION NUMBER: US/09/974,973
; CURRENT FILING DATE: 2001-10-21
; PRIOR APPLICATION NUMBER: US 60/239,913
; PRIOR FILING DATE: 2000-10-13
; NUMBER OF SEQ ID NOS: 19
; SOFTWARE: PatentIn version 3.0
; SEQ ID NO 1
; LENGTH: 3474
; TYPE: DNA
; ORGANISM: Corynebacterium glutamicum
; FEATURE:
; NAME/KEY: CDS
; LOCATION: (1)..(3474)
US-09-974-973-1

US-09-974-973-3
; Sequence 3, Application US/09974973
; Patent No. US20020177202A1
; GENERAL INFORMATION:
; APPLICANT: Hanke, Paul D.
; TITLE OF INVENTION: Feedback-Resistant Pyruvate Carboxylase Gene from Corynebacteri
; FILE REFERENCE: 1533.1230001/MAC/RGM
; CURRENT APPLICATION NUMBER: US/09/974,973
; PRIOR FILING DATE: 2001-10-21
; PRIOR APPLICATION NUMBER: US 60/239,913
; NUMBER OF SEQ ID NOS: 19
; SOFTWARE: PatentIn version 3.0
; SEQ ID NO 3
; LENGTH: 3474
; TYPE: DNA
; ORGANISM: Corynebacterium glutamicum
US-09-974-973-3

US-03-070-927A-89/c
; Sequence 89, Application US/09070927A
; Patent No. US20020120116A1
; GENERAL INFORMATION:
; APPLICANT: Charles A. Kunsch
; Patrick J. Dillon
; Steven Barash
; TITLE OF INVENTION: Enterococcus faecialis Polynucleotides and Polypeptides
; NUMBER OF SEQUENCES: 982
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Human Genome Sciences, Inc.
; STREET: 9410 Key West Avenue
; CITY: Rockville
; STATE: Maryland
; COUNTRY: USA
; ZIP: 20850
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Diskette, 3.50 inch, 1.4mb storage
; COMPUTER: Hp Vectra 486/33
; OPERATING SYSTEM: MSDOS version 6.2
; SOFTWARE: ASCII Text
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/09/070,927A
; FILING DATE: 04-May-2000
; CLASSIFICATION: <Unknown>
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: 60/046,655

FILING DATE: 1997-05-16
APPLICATION NUMBER: 60/044,031
FILING DATE: 1997-05-06
APPLICATION NUMBER: 60/066,009
FILING DATE: 1997-11-14
ATTORNEY/AGENT INFORMATION:
NAME: Kenley K. Hoover
REGISTRATION NUMBER: 40,302
REFERENCE/DOCKET NUMBER: PB369
TELECOMMUNICATION INFORMATION:
TELEPHONE: (301) 309-8504
TELEFAX: (301) 309-8512
INFORMATION FOR SEQ ID NO: 89:
SEQUENCE CHARACTERISTICS:
LENGTH: 20072 base pairs
TYPE: nucleic acid
STRANDEDNESS: double
TOPOLOGY: linear
SEQUENCE DESCRIPTION: SEQ ID NO: 89:

US-09-070-927A-89
Query Match 14.1%; Score 488.2; DB 10; Length 20072;
Best Local Similarity 50.3%; Pred. No. 2,5e-140;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  This GSS is part of a random genomic sequencing program of thirteen
  yeast species: Saccharomycetes bayanus var. uvarum, Saccharomycetes
  exiguus, Saccharomycetes servazzii, Zygosaccharomycetes rouxii,
  Saccharomycetes kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
  lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
  angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila,
  Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to

```

5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
